### The new NFPA 1971 Standard on protective ensembles for structural firefighting and proximity firefighting

2018 has introduced mandatory numerical sizing (64-82) in two widths, narrow (N) and wide (W).

To determine the best size and fit, measure your index finger from the palm crease to the tip in millimeters and this will give you the closest numerical size.

The diagram to the left shows where to measure and in this example the glove size would be a 76.

Now measure across the top of your knuckles as shown to the left and find the corresponding size/width based on the chart below.
